### Weight Rating Definitions:

**Gross Vehicle Weight Rating (GVWR)** is established by the chassis manufacturer and is the maximum allowable weight that the chassis of a fully loaded RV can support (including all passengers, fuel, water, supplies cargo and tongue weight)

**Gross Axle Weight Rating (GAWR)** is the maximum allowable weight that the components, such as tires, wheels, brakes, suspension and axle, is designed to support.

**Gross Combination Weight Rating (GCWR)** The maximum total loaded weight rating of the RV and any vehicle it's towing. GCWR minus GVWR is the total allowable weight for a towed vehicle.
